

Vanpro "guides" a major medical manufacturer with new aluminum extrusion program.

Cambridge, MN October 15, 2010- Vanpro announces it has just completed a preproduction pilot run for a guide PDM strap with a major medical equipment manufacturer. Working closely with the customer, Vanpro Engineers were able to assist in the design. The units are an aluminum extrusion, requiring a variety of machining operations, painting, and special packaging. The units are used to ensure proper installation of hand held units sliding into a battery docking

station. Full production is slated to begin 4rth quarter of 2010.
